Assessment System

Using Sonar Juniper: Enhancing Student Learning Through Data-Driven Insights

At St Paul's CofE Primary School, we are committed to providing the best learning experience for our children. To support our teaching and learning efforts, we use a system called **Sonar Juniper**. This system allows us to gather important data on your child's progress and performance, enabling us to personalise learning and make informed decisions that help every child succeed.

We believe it's essential for our school community, including parents, to understand how this system works, how we use the data, and how it benefits our children.

What is Sonar Juniper?

Sonar Juniper is an educational tool designed to collect, assess, and analyse children's performance data. This system helps us track various aspects of learning, such as academic progress, and attainment. The insights provided by Sonar Juniper allow us to identify strengths, areas for improvement, and tailor support for each child.

How We Use Sonar Juniper

We use Sonar Juniper to:

- **Assess Academic Progress:** The system helps us track your child's performance in key subjects, including reading, writing and maths.
- **Provide Early Intervention:** If a child is struggling in any area, we can use data from Sonar Juniper to intervene early and provide additional support, ensuring that each child has the best chance of success.
- **Support Personalisation:** Based on the insights gained from data analysis, we can personalise learning, offering tailored teaching strategies to meet the unique needs of each child.

Data Collection and Privacy

The data we collect is strictly related to your child's learning and development within our school environment. This includes:

- Assessment results
- Test scores
- Attainment levels
- Engagement

Your child's privacy and safety are very important to us. We ensure that all data is stored securely and accessed only by authorised school staff. We comply with all relevant data protection laws to guarantee that personal information is kept confidential.

Why We Use Data

The data we gather using Sonar Juniper is invaluable in helping us understand your child's educational needs. By analysing the data, we can:

- **Identify Areas for Improvement:** If a child is struggling in a particular area, we can provide targeted interventions to help them improve.
- **Celebrate Successes:** We can recognise and celebrate achievements, both big and small, motivating children to continue progressing.
- **Communicate with Parents:** The data provides a clear picture of your child's development, making it easier for us to share important insights with you and work together to support your child.

We believe that parents are key partners in their child's education. By keeping you informed about the data we collect and how we use it, we hope to foster a collaborative approach to supporting your child's learning journey.

- **Parent Meetings:** We will share relevant data and insights with you during parents' evening and other meetings that are relevant for your child on a 1:1 basis. This provides an opportunity to discuss your child's progress and set goals for the future.

Data Security and Confidentiality

We take the security of your child's data very seriously. All data collected through Sonar Juniper is securely stored and protected by the latest cybersecurity measures. We ensure that only authorised personnel have access to this data, and we never share personal data without parental consent, unless required by law.

Conclusion

Sonar Juniper is an essential tool for helping us support your child's growth and achievement. By using this system, we can track progress more efficiently, provide tailored learning support, and ensure that each child receives the help they need to succeed.
